3D WEBGL & SPATIAL MASTER PROMPTS

OFFICIAL PRODUCTION STARTER EDITION // FREE PROMPTS ARCHIVE

Claude 3.7 Sonnet Calibrated | Cursor & ChatGPT o3-mini Ready | 60 FPS Frame Budget | Zero AI Slop Guaranteed

EXECUTIVE BLUEPRINT SPECIFICATION

Welcome to the official Vine B Digital 3D WebGL starter collection. This document delivers production-grade, zero-slop prompt architectures designed to instruct modern coding models (Claude 3.7 Sonnet, Cursor Composer, and ChatGPT o3) into generating high-fidelity Three.js, React 19, and GLSL shader code in one single shot.

These blueprints eliminate common AI failure modes — such as unoptimized vertex loops, missing pointer events, and jerky CSS transitions — by pre-defining strict memory boundaries, 60 FPS requestAnimationFrame loops, instanced buffer geometries, and reactive camera matrices.

WHAT IS INCLUDED IN THIS FREE REPOSITORY:
- 100% Unlocked, Full-Text Production Prompt Architectures (Free Sample Tier)

&¡ OPEN CLOUD STUDIO PORTAL (ONE-CLICK PROMPT COPY) !'

3-STEP WORKFLOW TO EXECUTE THESE PROMPTS:

01 **Select Component & Copy Prompt**
Scroll to your chosen architecture in this document, or click the direct portal link to copy the raw text with a single tap.

02 **Paste into Claude 3.7 Sonnet or Cursor Composer**
Open your terminal or IDE agent. Paste the prompt unmodified into your agent. The blueprint will structure the React 19 + Three.js code.

03 **Deploy Production Experience**
Run your local dev server. You now possess a commercial 3D interactive hero, procedural shader, or financial terminal billed at $14,000+.

Hazmat Cybersecurity Master 3D Prompt

Reactive WebGL Shield & Threat Grid Architecture • Category: Cyber & Agency

Client Value: $14,500 | Tokens: 2,840 | 60 FPS WebGL | Three.js + GLSL | 14.2x Agency Markup

Interactive Reactive Core & GLSL Displacement

12,000 instanced vertices with dynamic Simplex noise shaders and real-time pointer velocity refraction.

&¡ Open & Copy in Portal

%¶ Watch 60FPS Video

COMPLETE AI PROMPT BLUEPRINT (COPY DIRECTLY INTO CLAUDE OR CURSOR):

```
Act as a Principal 3D Creative Technologist (Awwwards Site of the Year).
Build a production-ready, dark-mode Cybersecurity Enterprise Hero experience in React + Three.js +
Tailwind CSS.

TECHNICAL CORE REQUIREMENTS:
1. THREE.JS VIEWPORT & MESH ARCHITECTURE:
   - Create an instanced particle dodecahedron core surrounded by dual floating counter-rotating ring
lattices.
   - Implement custom vertex shaders with Simplex noise displacement driven by (position + time * 0.4).
   - Vertex colors must interpolate between neon cyan (#00f2fe) and encrypted violet (#4facfe).
   - Camera orbits smoothly with lerped mouse inertia damping (lookAt lerp factor = 0.05).

2. REAL-TIME THREAT BREACH SIMULATION:
   - Clicking or dragging triggers an animated shockwave ripple pulse radiating outwards along mesh
normals.
   - On cursor acceleration > 2.5, inject temporary chromatic aberration and glitch fragment jitter.
   - Telemetry HUD overlay with live latitude/longitude, encrypted packet counter, and 60 FPS counter.

3. RESPONSIVE ARCHITECTURE & CLEAN SHUTDOWN:
   - Automatically resize on window dimension changes with pixel ratio clamped at
Math.min(window.devicePixelRatio, 2).
   - Proper Three.js geometry/material disposal on React unmount to eliminate GPU memory leaks.
   - Clean TypeScript interfaces with zero external heavy assets required.
```

Institutional FinTech 3D Liquidity Order Book

Real-Time WebGL Depth Mountain & High-Frequency Volume Mesh • Category: FinTech

Client Value: $24,000 | Tokens: 3,350 | Sub-12ms Liquidity | Three.js + React | Billed to Hedge Fund

Wall Street Quantitative Visualizer

Continuous 3D bid/ask depth wall transforming 50 ticks/sec into an undulating topographic volume mesh.

&¡ Open & Copy in Portal

%¶ Watch 60FPS Video

COMPLETE AI PROMPT BLUEPRINT (COPY DIRECTLY INTO CLAUDE OR CURSOR):

```
Create an institutional quantitative trading terminal featuring an interactive 3D Order Book Depth Mountain in Three.js and React 19.

CORE TRADING ARCHITECTURE:
1. TOPOGRAPHIC 3D DEPTH MESH:
   - Render a dual-sided extruded plane geometry representing Bid (Buy) and Ask (Sell) liquidity volumes.
   - Bids: Emerald green gradient (#10b981 to #059669) on negative X axis.
   - Asks: Crimson red gradient (#ef4444 to #b91c1c) on positive X axis.
   - Vertex heights (Y axis) morph smoothly in real-time based on simulated or WebSocket order flow.
   - Wireframe grid overlay sitting directly on top of shaded depth mountains with subtle opacity.

2. SUB-12MS TICK TELEMETRY:
   - High-frequency update loop executing via requestAnimationFrame without triggering React re-renders.
   - Interactive crosshair slice plane: Hovering over any price coordinate highlights depth slice and displays total cumulative volume, implied spread, and estimated slippage in a floating monospace glass HUD card.

3. HARDWARE & WEBGPU READY:
   - Pure responsive viewport adapting seamlessly from 4K ultrawide trading desk displays to mobile iOS Safari.
   - Camera pan and pitch controls with bounded limits to prevent upside-down orientation.
   - Calibrated for instant generation with Claude 3.7 Sonnet and Cursor Composer.
```

High-Viscosity Procedural Liquid & Mercury Shader

Real-Time Surface Tension & Chromatic Sheen Physics • Category: Advanced 3D

Client Value: $16,500 | Tokens: 3,100 | 60 FPS iOS/Android | GLSL Raymarching | React Three Fiber

Iridescent Mercury Fluid Dynamics

Metaball-inspired liquid mercury shader with cursor inertia wake, iridescent specular sheen, and droplet coalescence.

&¡ Open & Copy in Portal

%¶ Watch 60FPS Video

COMPLETE AI PROMPT BLUEPRINT (COPY DIRECTLY INTO CLAUDE OR CURSOR):

```
Code a custom GLSL liquid mercury shader in React Three Fiber that responds dynamically to pointer coordinates and scrolling velocity.

PHYSICS & SHADER SPECIFICATIONS:
1. RAYMARCHING SURFACE TENSION:
   - Construct a Signed Distance Function (SDF) blending 5 metaball nodes using smooth minimum (smin polynomial).
   - Node 1 tracks the cursor with spring physics and damping.
   - Nodes 2-5 orbit gently with trigonometric harmonic frequencies (sin(t * 0.7), cos(t * 1.1)).
   - Implement normal calculation via gradient estimation: normalize(vec3(sdf(p + eps.xyy) - sdf(p - eps.xyy), ...)).

2. OPTICAL PROPERTIES & SPECULAR SHEEN:
   - Metallic reflection using Fresnel approximation (Schlick's formula with F0 = 0.95 for polished liquid chrome).
   - Dynamic environment mapping with chromatic dispersion (splitting red, green, and blue rays along normal tangents).
   - High-contrast specular highlights reacting to dynamic virtual directional light source.

3. MOBILE PERFORMANCE CONTROLS:
   - Maximum raymarching steps = 48 with step distance threshold = 0.001.
   - Resolution scale toggle supporting 0.75x on mobile screens to ensure solid 60 FPS on iOS and Android.
   - Zero external heavy physics libraries — pure WebGL fragment shader implementation.
```
