3D WEBGL & SPATIAL MASTER PROMPTS

OFFICIAL PRODUCTION STARTER ARCHIVE // 100% UNLOCKED FREE SCHEMAS

Claude 3.7 Sonnet Calibrated | **Cursor & ChatGPT o3-mini** | **60 FPS Frame Budget** | **Zero External 3D Models**

THE ONE-SHOT CREATIVE TECHNOLOGIST SPECIFICATION

Welcome to the official Vine B Digital 3D WebGL starter collection. Most AI prompts fail to generate usable 3D web code because they lack strict memory boundaries, fail to allocate instanced vertex buffers, or introduce sluggish physics loops.

Every blueprint in this repository is calibrated with deterministic constraints:
- 60 FPS RequestAnimationFrame throttling with delta-time compensation
- Instanced BufferGeometry eliminating draw-call overhead on mobile GPUs
- Mathematical GLSL Simplex Noise displacing vertices without external .GLTF/.OBJ dependencies
- Strict cleanup & dispose cycles on unmount to prevent browser memory leaks

&¡ OPEN INTERACTIVE STUDIO PORTAL (ONE-CLICK PROMPT COPY) !'

experiences in a single shot.

HOW TO EXECUTE THESE PRODUCTION PROMPTS:

01 **Select Component & Copy Full Architecture**
Review the 3 unlocked production blueprints on pages 2-4. Copy the complete prompt directly from this PDF or click the green button to open it inside the Studio Portal.

02 **Paste into Claude 3.7 Sonnet or Cursor Agent**
Create a new React 19 + Tailwind project. Paste the prompt unmodified into your agent. The blueprint forces the AI to output self-contained, compile-ready Three.js code.

03 **Deploy Production Experience to Vercel**
Run `npm run build` and ship. Your deployment delivers responsive 60 FPS interactive 3D motion physics that top creative agencies bill at $14,000 to $28,000+ per engagement.

' Official Authenticated Release • Verified Zero-Hallucination Schemas • Reseller Rights Included

Hazmat Cybersecurity Master 3D Prompt

Reactive WebGL Shield & Threat Grid Architecture • Category: Cyber & Agency

Client Value: $14,500 | Tokens: 2840 | 60 FPS WebGL | Three.js + GLSL Shaders | Claude 3.7 & Cursor

Component Architecture & Live Preview

Deploys an instanced particle dodecahedron core surrounded by dual counter-rotating ring lattices with Simplex noise displacement shaders and interactive pointer velocity ripples.

&¡ Open & Copy in Studio Portal

%¶ Watch 60FPS Video Reel

COMPLETE AI PROMPT BLUEPRINT (COPY DIRECTLY INTO YOUR AGENT):

```
Act as a Principal 3D Creative Technologist (Awwwards Site of the Year recipient).
Build a production-ready, dark-mode Cybersecurity Enterprise Hero experience in React 19 + Three.js + Tailwind CSS.

TECHNICAL CORE ARCHITECTURE:
1. THREE.JS VIEWPORT & INSTANCED MESHES:
  - Create an instanced particle dodecahedron core (12,000 vertices) enclosed by counter-rotating ring lattices.
  - Implement custom vertex shaders with Simplex noise displacement driven by: position + time * 0.4.
  - Interpolate vertex color gradients from neon cyan (#00f2fe) to encrypted violet (#4facfe).
  - Camera orbits smoothly with lerped mouse damping (lookAt lerp factor = 0.05).

2. REAL-TIME THREAT BREACH SIMULATION:
  - Clicking or dragging triggers an animated shockwave ripple pulse radiating outwards along mesh normals.
  - On cursor acceleration > 2.5, inject temporary chromatic aberration and glitch fragment jitter.
  - Telemetry HUD overlay with live latitude/longitude, encrypted packet counter, and 60 FPS counter.

3. RESPONSIVE ARCHITECTURE & CLEAN DISPOSAL:
  - Automatically resize on window dimension changes with pixel ratio clamped at Math.min(window.devicePixelRatio, 2).
  - Strict geometry and material cleanup on React unmount to eliminate GPU memory leaks.
  - Zero external .GLTF/.OBJ dependencies — fully self-contained WebGL procedural generation.
```

PRO TIP FOR CLAUDE 3.7 & CURSOR: In Claude 3.7 Sonnet, enable Extended Thinking mode for mathematical shader precision without NaN glitching.

Institutional FinTech 3D Liquidity Order Book

Real-Time WebGL Depth Mountain & High-Frequency Volume Mesh • Category: FinTech & Trading

Client Value: $24,000 | Tokens: 3350 | Sub-12ms Liquidity | Three.js + React 19 | Claude 3.7 & Cursor

Component Architecture & Live Preview

Wall Street institutional trading visualizer converting live order flow into an undulating 3D topographic volume mountain with interactive crosshair price slices.

&¡ Open & Copy in Studio Portal

%¶ Watch 60FPS Video Reel

COMPLETE AI PROMPT BLUEPRINT (COPY DIRECTLY INTO YOUR AGENT):

Act as a Quantitative Frontend Engineer. Build an institutional trading terminal featuring an interactive 3D Order Book Depth Mountain in Three.js and React 19.

CORE TRADING SPECIFICATIONS:
1. TOPOGRAPHIC 3D DEPTH MESH:
- Render a dual-sided extruded plane geometry representing Bid (Buy) and Ask (Sell) liquidity volumes.
- Bids: Emerald green gradient (#10b981 to #059669) along the negative X axis.
- Asks: Crimson red gradient (#ef4444 to #b91c1c) along the positive X axis.
- Vertex heights (Y axis) morph smoothly in real-time based on simulated order book flow.
- Wireframe grid overlay sitting directly over shaded depth mountains with subtle specular shine.

2. SUB-12MS TICK TELEMETRY:
- High-frequency update loop executing via requestAnimationFrame without triggering React re-renders.
- Interactive crosshair slice plane: Hovering over any price coordinate highlights depth slice and displays total cumulative volume, implied spread, and estimated slippage in a floating monospace glass HUD card.

3. HARDWARE & WEBGPU READY:
- Pure responsive viewport adapting seamlessly from 4K ultrawide trading desk displays to mobile iOS Safari.
- Camera pan and pitch controls with bounded limits to prevent upside-down orientation.
- Calibrated for instant generation with Claude 3.7 Sonnet and Cursor Composer.

Ø=ÜI Direct Website URL: https://vinebdigital.store/#portal?prompt=fintech-liquidity-pool

PRO TIP FOR CLAUDE 3.7 & CURSOR: Instruct Cursor to keep Three.js meshes outside React state to maintain sub-12ms frame budgets.

High-Viscosity Procedural Liquid & Mercury Shader

Real-Time Surface Tension & Chromatic Sheen Physics • Category: Spatial & Shaders

Client Value: $16,500 | Tokens: 3100 | Mercury Raymarching | GLSL Fragment + R3F | Claude 3.7 & Cursor

Component Architecture & Live Preview

Raymarched procedural liquid mercury shader with cursor inertia wake, iridescent specular sheen, and dynamic metaball droplet coalescence running at 60 FPS on mobile.

&¡ Open & Copy in Studio Portal

%¶ Watch 60FPS Video Reel

COMPLETE AI PROMPT BLUEPRINT (COPY DIRECTLY INTO YOUR AGENT):

Act as a GLSL Shader Specialist. Code a custom procedural liquid mercury shader in React Three Fiber that responds dynamically to pointer coordinates and scrolling velocity.

PHYSICS & SHADER SPECIFICATIONS:
1. RAYMARCHING SURFACE TENSION:
- Construct a Signed Distance Function (SDF) blending 5 metaball nodes using smooth minimum (smin polynomial).
- Node 1 tracks the cursor with spring physics and damping.
- Nodes 2-5 orbit gently with trigonometric harmonic frequencies (sin(t * 0.7), cos(t * 1.1)).
- Implement normal calculation via gradient estimation: normalize(vec3(sdf(p + eps.xyy) - sdf(p - eps.xyy), ...)).

2. OPTICAL PROPERTIES & SPECULAR SHEEN:
- Metallic reflection using Fresnel approximation (Schlick's formula with F0 = 0.95 for polished liquid chrome).
- Dynamic environment mapping with chromatic dispersion (splitting red, green, and blue rays along normal tangents).
- High-contrast specular highlights reacting to dynamic virtual directional light source.

3. MOBILE PERFORMANCE CONTROLS:
- Maximum raymarching steps = 48 with step distance threshold = 0.001.
- Resolution scale toggle supporting 0.75x on mobile screens to ensure solid 60 FPS on iOS and Android.
- Zero external heavy physics libraries — pure WebGL fragment shader implementation.

Ø=ÜI Direct Website URL: https://vinebdigital.store/#portal?prompt=liquid-viscosity-shader

PRO TIP FOR CLAUDE 3.7 & CURSOR: Ask your AI agent to implement the smin smooth minimum polynomial to create realistic mercury droplet fusion.
