3D WEBGL & SPATIAL MASTER PROMPTS

OFFICIAL PRODUCTION STARTER ARCHIVE // STUDIO PORTAL ACCESS PASS

Claude 3.7 Sonnet Calibrated | Cursor & ChatGPT o3-mini | 60 FPS Frame Budget | Zero External 3D Models

Ø=Ý AUTHENTICATED ACCESS PASS • PORTAL UNLOCKED

How to Unlock & Copy Your 30 Production 3D Prompts

To ensure you always receive the latest unminified, zero-hallucination code with live Three.js viewports, all prompts are delivered directly inside the official Studio Portal.

THREE EASY STEPS TO COPY YOUR PROMPTS:

1. USE YOUR REGISTERED EMAIL:
   Access is automatically provisioned for the email address you entered on the download request form.
2. LAUNCH THE STUDIO PORTAL:
   Click the button below to open the interactive Studio Portal in your browser.

Ø=Þ€ OPEN STUDIO PORTAL & COPY PROMPTS NOW !'

PRODUCTION 3D WEBGL CODE ARCHITECTURE STANDARDS:

60 FPS

Deterministic Frame Rate Budgeting

Every prompt mandates RequestAnimationFrame throttling with delta-time compensation, preventing sluggish rendering on mobile batteries and low-power laptops.

0 KB

Zero External .GLTF or .OBJ Asset Dependencies

Components procedurally synthesize complex 3D meshes using InstancedBufferGeometry and GLSL Simplex Noise — eliminating slow 3D file loading times.

100%

Strict GPU Memory Garbage Collection

All geometries, materials, and textures implement automatic dispose() cycles on React unmount, guaranteeing zero browser memory leaks for enterprise clients.

Hazmat Cybersecurity Master 3D Prompt

Reactive WebGL Shield & Threat Grid Architecture • Category: Cyber & Agency

Client Value: $14,500 | Tokens: 2840 | 60 FPS WebGL | Three.js + GLSL Shaders | Claude 3.7 & Cursor

Component Architecture & Live Preview

Deploys an instanced particle dodecahedron core surrounded by dual counter-rotating ring lattices with Simplex noise displacement shaders and interactive pointer velocity ripples.

%¶ Watch 60FPS Video Reel

PROCEDURAL GRAPHICS & THREE.JS SHADER SPECIFICATION:

1. THREE.JS VIEWPORT & INSTANCED MESH PIPELINE

Generates a procedural 12,000-vertex dodecahedron particle cluster enclosed by dual concentric counter-rotating ring lattices. Utilizes InstancedBufferGeometry to collapse thousands of drawing operations into a single GPU draw call.

2. MATHEMATICAL GLSL SHADERS & THREAT SIMULATION

Displaces vertices dynamically using a 3D Simplex noise algorithm driven by time and position. Features interactive click-and-drag shockwave ripples that propagate along surface normals, accompanied by acceleration-based chromatic aberration and telemetry HUD.

3. RESPONSIVE FRAME RATE BUDGETING & CLEAN DISPOSAL

Implements window resize listening with pixel-ratio clamping (Math.min(window.devicePixelRatio, 2)) to prevent mobile overheating. Incorporates complete geometry and material disposal handlers on component unmount.

Institutional FinTech 3D Liquidity Order Book

Real-Time WebGL Depth Mountain & High-Frequency Volume Mesh • Category: FinTech & Trading

Client Value: $24,000 | Tokens: 3350 | Sub-12ms Liquidity | Three.js + React 19 | Claude 3.7 & Cursor

Component Architecture & Live Preview

Wall Street institutional trading visualizer converting live order flow into an undulating 3D topographic volume mountain with interactive crosshair price slices.

%¶ Watch 60FPS Video Reel

PROCEDURAL GRAPHICS & THREE.JS SHADER SPECIFICATION:

1. PARAMETRIC DEPTH MESH & HIGH-FREQUENCY BID/ASK BARS

Constructs a dual-colored wireframe volume terrain (emerald green bid side, infrared ask side). Deploys an array of instanced cylinder volume bars whose heights animate smoothly using spring physics driven by incoming simulated trading volume.

2. INTERACTIVE CROSSHAIR & REAL-TIME RAYCASTING

Integrated Three.js Raycaster traces cursor ray intersections with the topographic mesh in real time. Projects an illuminated crosshair plane with dynamic price-slice readout HUD displaying sub-millisecond spread telemetry.

3. DELTA-TIME COMPENSATION & BATTERY CONSERVATION

Animation loop utilizes delta-time calculations (clock.getDelta()) to guarantee consistent wave oscillation speeds across 60Hz, 120Hz ProMotion, and 144Hz gaming displays without CPU throttling.

Liquid Mercury Audio-Reactive Kinetic Mesh

Raymarching Signed Distance Field (SDF) Fluid Sculpture • Category: Spatial & Luxury

Client Value: $18,500 | Tokens: 3120 | Raymarched SDF | Three.js + GLSL Fragment | Claude 3.7 & Cursor

Component Architecture & Live Preview

Organic molten chrome fluid simulation created via raymarching signed distance fields (SDF) with real-time environment mapping, metallic fresnel, and audio-reactive frequency swells.

%¶ Watch 60FPS Video Reel

PROCEDURAL GRAPHICS & THREE.JS SHADER SPECIFICATION:

1. PURE GLSL SIGNED DISTANCE FIELD (SDF) RAYMARCHING

Executes a single fullscreen quad rendering raymarched mathematical spheres blended together via smooth polynomial minimum (smin). Creates realistic molten liquid droplet fusion without heavy physics libraries.

2. CHROMATIC DISPERSION & METALLIC PBR ENVIRONMENT MAPPING

Calculates dynamic surface normals using the gradient of the distance field. Simulates metallic chrome reflectance with chromatic dispersion — splitting red, green, and blue rays along surface tangents for luxury jewelry aesthetics.

3. GPU CLAMPING CONTROLS FOR MOBILE RELIABILITY

Constrains raymarching iterations to a maximum of 48 steps with an early-exit epsilon threshold (0.001). Implements dynamic resolution scaling (0.75x fallback on mobile GPUs) ensuring flawless 60 FPS on iPhones and Android.
